

## SCS Authorized Products, Suppliers and Anti-Counterfeiting Statement

At Solution Control Systems, we are unwavering in our commitment to quality, authenticity, and integrity in everything we deliver. We understand that trust is the foundation of every successful project, which is why we exclusively source products, components, and materials from authorized, reputable suppliers and manufacturers who share our high standards.

To ensure optimal safety, performance, and reliability, we implement proactive quality assurance measures across our entire supply chain. Each supplier we partner with is carefully vetted based on their proven ability to meet stringent quality criteria and uphold ethical business practices. This guarantees that every component integrated into our systems is genuine, traceable, and fully compliant with industry regulations.

We take a zero-tolerance stance against counterfeiting and the distribution of unauthorized or substandard products. Counterfeit items not only undermine quality but also pose significant risks to safety and operational reliability. By working exclusively with trusted and verified sources, we safeguard our customers from these risks and protect the integrity of the products we deliver.

We encourage our customers to purchase only through official channels or authorized distributors to ensure they receive authentic Solution Control Systems products. We remain vigilant in our efforts to detect, deter, and take legal action against counterfeit activity, upholding the confidence our customers place in our name.

At Solution Control Systems, quality isn't just a promise—it's our responsibility.
